EXPERIENCE

Project Name: Estimation Tool

09/21 to Till Date

Role: Full Stack

It is a Project where we are on the process of building the Estimation Tool. The tool is trying to integrate all different types of the delivery models available and build the formula using which all the Projects across corporate will be analyze and evaluate.

It is using other product available in the market as well, which will be used internally to give the user all types of estimation available in the form they were already used.

Technology used: .Net Core and Angular 11, Angular Material, PrimeNg

Key Deliverables

- Work with the automation lead to design and develop an automation framework that meets business needs with respect to functionality, performance, scalability, security and reliability.
- Develops test data where needed.
- Interact with clients on new requirements and define the priorities.
- Expertise's in debugging and troubleshooting existing code using developer tools and Augury.
- Co-ordinated with the different teams for testing and to develop the process to meet the Technical Design Document.
- I have worked closely with the team to debug the application to fix the bugs and Production support.
- Trace down and troubleshoot UI problems and Backend API.

TOOLS USED

- Visual Studio Code
- Jira
- GIT/GITHUB
- Postman
- Confluence
- @ngrx/store-devtools
- Visual Studio
- Swagger
